The diagram shows a horizontal line labeled I . A curve labeled (R) is tangent to line I at point d . A vertical dashed line passes through point m on the curve and point g on line I . A solid line segment connects points b' and c' , which are located above the curve. Point a' is also shown near b' . An angle α is indicated between a horizontal dashed line and a line passing through b' and c' . Another angle β is indicated between a vertical dashed line and a line passing through m .
